

SMOG

What is SMOG?

Smog is a combination of smoke and fog. It is a grey, dirty haze that is made up of a mixture of smoke and fog. It is a common problem in cities that have a lot of factories and cars.

Smog

Smog is a combination of smoke and fog. It is a grey, dirty haze that is made up of a mixture of smoke and fog. It is a common problem in cities that have a lot of factories and cars.

Types of smog

There are two types of smog: industrial smog and photochemical smog. Industrial smog is caused by factories and power plants. Photochemical smog is caused by car exhaust and other pollutants.

Negative Effects

Smog has many negative effects on the environment and human health. It can cause respiratory problems, such as asthma and bronchitis. It can also damage crops and buildings. In addition, smog can reduce visibility and make it difficult to see.

Solution

There are several ways to reduce smog. One way is to use public transportation or carpooling. Another way is to use energy-efficient appliances and light bulbs.
